Mountain Weather Forecast

Bannau Brycheiniog (Brecon Beacons) National Park

Forecast valid from 00:00 on Sunday 11 Aug 2024 until 23:59 on Monday 12 Aug 2024

Forecast Issued on Saturday 10 Aug 2024 at 15:40

Confidence: High confidence in a fine and very warm day during daylight hours on Sunday, though moderate confidence in the risk of thundery showers after dark and on Monday. Moderate confidence in the timings of frontal systems and associated cloudier and wetter periods from Tuesday onwards and low in the details of rain.

Headline for Sunday 11 Aug 2024: Any fog clearing then a fine and very warm day with periods of sunshine.

Mountain weather hazards on Sunday 11 Aug 2024

Blizzards No Likelihood	**Heavy persistent snow** No Likelihood	**Storm force winds** No Likelihood
Gales No Likelihood	**Severe chill effect** No Likelihood	**Poor visibility** Low Likelihood
Thunderstorms Low Likelihood	**Heavy persistent rain** No Likelihood	**Strong sunlight** High Likelihood

Forecast for Sunday 11 Aug 2024

Weather: Patchy fog and low cloud clearing by mid-morning to leave a fine day with cloudy spells but also sunny periods, these perhaps most prolonged later in the day. A very small chance of isolated thundery showers after sunset. Feeling much warmer and more humid than on Saturday.

Chance of cloud-free hill tops above 600m: 60% becoming 95% or greater.

Low cloud and visibility: Locally poor or very poor visibility at first with patches of mist and valley fog lifting and then dispersing. Periods of cloud between 500-700m possible until midday too, but thereafter any cloud is expected to remain above the summits. Away from any cloud, visibility will be good, though distant hills and landmarks will appear hazy, especially by the evening.

Meteorologist's View

Strong sunshine will mean that UV levels will rise to high or very high during the midday hours. Therefore sun protection is strongly advised. The risk of thunderstorms on Sunday evening is primarily confined to after dark and through the early hours of Monday. Whilst these may bring frequent lightning, the risk of any significant rainfall is at this stage quite low.

Recent rainfall: measured at Neuadd: altitude 353m

Recorded at	Last 24 hours:	Last 48 hours:	Last 72 hours:
14:00 on Sat 10 Aug 2024	3mm	12.4mm	17.2mm

Forecast for Monday 12 Aug 2024

Weather: Some strong and gusty easterly winds through the early hours with an ongoing low risk of the odd thundery shower or flash of lightning. Isolated thunderstorms are possible through the day too, but a dry day is considered much more likely with cloudy skies at times during the morning, then mostly sunny through the afternoon. Feeling hot in the sunshine though still quite breezy.

Maximum wind: Southerly 20-30 mph.

Chance of cloud-free hill tops above 600m: 40% during the morning becoming 90% by the afternoon.

Low cloud and visibility: Periods of cloud above 500-600m developing during the morning, mainly in the west. This will give poor visibility at higher levels. Cloud clearing by the afternoon with visibility generally becoming good, though still fairly hazy at times.

Temperature: **Valleys:** Plus 16 Celsius rising to plus 27 Celsius
At 600m: Plus 17 Celsius rising to plus 23 Celsius.
Freezing level: Well above the summits.
